Abstract:

From the perspective of system theory, multiple subsystems influence and then achieve a new balance, and before the new balance system optimization to upgrade the parallel process is the essence of the “new normal”, and corresponding to higher education, means that industry enterprise system, education system and other subsystems influence and reach a new balance, higher education new normal is before the arrival of the new balance of education mode optimization and upgrade a process. In this context, independent colleges, as a part of the education system, should also be actively adjusted. During the period, the application of modern panoramic experiential teaching mode may help independent colleges to adapt to the new normal of higher education. Therefore, this paper will discuss the construction of modern panoramic experiential teaching mode in independent colleges based on the new normal of higher education.

Keywords:

New Normal of Higher Education, Independent College, Modern Panoramic Experiential Teaching Mode

1. Introduction

Independent college refers to the ordinary college of higher learning that implements bachelor's degree education or above and the national organization organization group that implement bachelor's degree education, which belongs to an important part of private higher education and has public welfare. As a new teaching mode, a panoramic experiential teaching mode can promote the innovation and development of independent colleges. As the name suggests, the core of the panoramic experience teaching mode includes panoramic, experience, panoramic meaning is to stimulate students' interest in learning at the same time help students can better understand related theory, experience is through students experience to deepen the understanding and application of knowledge, panoramic experience teaching education mode from traditional education pay more attention to the combination of knowledge and practical problems and students problem analysis,

solving ability to develop. However, in terms of the current teaching situation, the practical problems facing the construction of panoramic experiential teaching mode are still very complex. This is also the purpose of this study. By exploring the characteristics of the new normal of higher education and discussing the construction of the modern panoramic experiential teaching mode of independent colleges, we can make a modest contribution to the progress and development of higher education. [1]

2. Characteristics of the New Normal of Higher Education

The background of the new normal of higher education is the new normal of China's economy, and its connotation and characteristics also follow the law of economic development to a certain extent, which can be mainly classified into the following four points:

With innovation as the driving force: the innovation ability is the vitality, the education cause has experienced a long-term development, and its educational mode, educational methods and educational content continues to develop with the progress of The Times. And with the development of social economy, students employment pressure increasing, conventional standard education has cannot meet the demand of the school talent output quality, at the same time, the economic development dynamic also unpredictable, innovation ability occupies an important position in the employment selection, and schools as an important base of students' ability training, should also be innovative spirit throughout the education link. With the construction and development of colleges and universities, a competition between college education has been formed. In this context, innovation has also become the driving force of the development of higher education. Only by combining the characteristics of The Times can the vitality continuously enhance education. [2]

Follow the market orientation, from denotation to connotative transformation: with the education and social and economic development, employment situation more severe, schools as a talent training base in the aspect also face increasing pressure, employment has become a sword hanging on the head of students, has become a level of institutions of higher learning, whether it can provide support for students' employment has become the key to higher education reform. Therefore, higher education needs to follow the market-oriented reform of the teaching system, and understand the type of market talent shortage to carry out targeted education reform. In this regard, the extension of scale expansion may not occupy the development center of higher education institutions, but will gradually transform to the connotation of the pursuit of quality. In recent years, China's attention to education has only increased, and it has certain financial resources to support higher education. The shortage of institutions of higher learning has been basically solved and even the oversupply situation. In the development of higher education, we need to pay more attention to the market demand and take the market demand oriented to optimize the allocation of resources. Based on this, the improvement of the quality and efficiency of higher education attracts more attention, and then promotes the transformation of extension to connotation.

Optimization of the educational structure. At present, China's higher education has formed a hierarchical structure of junior college, undergraduate and graduate students, which can basically meet the needs of the people's higher education. However, with the development of social economy, the cultivation of applied talents has become the focus of attention in the field of education. Therefore, it is necessary to consider

setting up a parallel advanced technical level education on the basis of graduate students to meet the subsequent development needs of human capital. [3]

3. Construction Ideas of Modern Panoramic Experience Teaching Mode of Independent Colleges Under the New Normal of Higher Education

Facing the dual pressure of the new normal of economy and the new normal of higher education, independent colleges, as an important part of education, still have some deficiencies in the talent training mode. Therefore, when constructing the panoramic experience teaching mode, we should objectively analyze the advantages and disadvantages of independent colleges and find out the inherent problems. Secondly, the core of the panoramic experiential teaching mode should be clarified. As the name suggests, the core of panoramic experiential teaching mode is panorama and experience. Panorama mainly refers to the design of teaching environment, which can restore the practical situation more truly. During the period, the situation can be set by video, sound effects and text. Experience, in other words, is practice. In class, students can be replaced through role playing. With the development of education, the integration of industry and learning in the field of education provides place support for off-school experience, and students can enter the real working situation for practice. On this basis, the integration of panorama and experience forms a new teaching mode, which makes it more feasible in modern education. Finally, it is necessary to summarize the practical problems in constructing the modern panoramic experience teaching mode and solve them gradually. [4]

4. Practical Problems Faced in the Construction of Modern Panoramic Experience Teaching Mode of Independent Colleges Under the New Normal of Higher Education

4.1. Lack of faculty strength

Due to the short development process of modern panoramic experience teaching mode of independent colleges in China, the development of science and technology and economic development is relatively slow compared with the construction of teacher team. The construction of teachers has always been the key content of the education reform of independent colleges, but the influence of various factors limits the construction of teachers. Especially the current teaching pressure surge and independent colleges and universities at the beginning of the existence of external teachers, young teachers but less backbone teachers, and the construction of panoramic experiential teaching mode need professionals have relevant practical experience, at present, this kind of talent in independent college of faculty proportion is relatively low. Young teachers have their own advantages. On the one hand, they have a relatively strong ability to accept new things and have certain advantages in the application of computer technology. On the other hand, they are more active in thinking and can publish feasible suggestions in teaching innovation. But at the same time, some young teachers have not been stable or difficult to adhere to the education position for a long time. The strong mobility of teachers will have a bad impact on teacher training. [5]

4.2. Resource acquisition and allocation problems

In the construction of modern panoramic experience teaching mode, if taking the combination of industry and learning, let students into social institutions to practice, it involves a problem of resource allocation. In adopting the combination of industry and learning, a company to accept a class of all students into its unit practice of the possibility is very small, then, who will become a problem. If not handled properly, it will affect the learning atmosphere. Even if it can ensure that every student can participate in the combination of industry and education, their value assessment of their own "industry" or is different from the school value assessment may also lead students to the idea of unfair allocation of resources. Before considering the allocation of resources, one problem to consider is the resource acquisition. How to find a cooperative institution for the college itself and establish a legal cooperative relationship with the cooperative institution is also a difficult problem. The risk response ability of the relevant industry itself is relatively weak. The cooperation with independent colleges may be an opportunity or an unknown risk in the development of industrial economy, which requires rigorous weighing of advantages and disadvantages, and most enterprises have the first economic benefit in the process of development. Independent colleges need to balance the relationship between economy and education during this period. Especially when there is invisible competition between higher education institutions, it is difficult for independent colleges to occupy a favorable position in this competition and obtain their own needed resources.

4.3. Teachers and students should adapt to the time needed

The application of a new teaching mode, teachers and students need a certain time to adapt to the time. Teachers, because it entered the education in the industry is given priority to with theoretical education, and the theory of education in invisible also will affect its subsequent work, and before the panoramic experience teaching mode application, teachers have formed their own teaching comfort zone, and out of the comfort zone process needs certain psychological construction and ability. In terms of students, they, like teachers, have already found their own comfort zone in the long-term learning process. Once it changes, it is easy to stimulate students' reverse psychology. In addition, some majors such as information science, computer and law knowledge are updated relatively quickly, and teachers need to constantly update their knowledge base, but also need to adapt to and study new education models, or it is difficult to take both into account.

4.4. The degree of informatization needs to be improved urgently

The application of information technology can provide convenience for the construction of panoramic experience teaching mode to a certain extent, which can help teachers to build teaching situations, help teachers to better manage students, and provide more suitable solutions for students' assessment and evaluation. At present, there is still some development space for the information construction of independent colleges. For example, in the informatization of teaching resources, the sharing of teaching resources still needs to be studied more in-depth, and the teaching resource library has not been effectively utilized. At the same time, in the management of teaching resource system, the integration of information technology is not deep enough, which leads to the difficulty of resource transfer and affects the teaching efficiency. [6]

5. Construction Strategy of Modern Panoramic Experience Teaching Mode of Independent Colleges Under the New Normal of Higher Education

This section should present your findings objectively, explaining them largely, concisely, precisely in the text. You should show how your results contribute to the scientific knowledge in academic community clearly and logically. Results and Discussion may be divided by subheadings, concluding equations, figures, tables, etc.

5.1. Refactoring the teaching content and the teaching evaluation system

Facing the new normal of higher education, it is necessary to reform the previous discipline system and reconstruct the teaching content. During the period, the balance of theory and practice. For example, in the tourism management major, We can build “guide panoramic experience teaching” and take this as the starting point to build a systematic guide work process, The work process of the tour guide can be divided into: (1) group reception service; (2) Tour and visit service; (3) Shopping, catering and other entertainment services; (4) Special requirements of individual tourists; (5) Tourism accidents and risk treatment; (6) Create a tourism atmosphere; (7) Seven course modules such as group delivery service, design relevant situations and integrate into basic theoretical education before, Realize the combination of theory and practice, To some extent, the combination of theory and practice also means the integration of teaching classroom and social reality. Therefore, in the construction of the teaching content system, the teaching content should be designed combined with the direction of professional employment and integrated into the teaching practice. On this basis, the teaching evaluation system should also be updated according to the reconstruction of the teaching content system. Not only paper examination, but also situational assessment, that is, set up relevant situations, allowing students to deal with them according to what they have learned. During the period, relevant professional professionals can also be introduced to evaluate the way students deal with problems. [7]

5.2. Strengthen teacher training and pay attention to the construction of “quality culture”

In view of the transformation of higher education from extension to connotation under the new normal of higher education, “quality culture” will become a soft weapon for independent colleges to establish cooperative relations with the outside world. During this period, it is necessary to constantly update the general cognition of independent colleges, and integrate the concept of "pursuing quality school-running" throughout the whole process of education reform. Relative to the state and the public recognition of “211” and “985” colleges and universities, independent college in social visibility or less, specializing, however, can start from independent college own advantages, the advantage development will become irreplaceable in the field of education, thus, in the realization of production, create a panoramic experiential teaching mode can obtain more social resources, have more voice in the relationship. During this period, first of all, it is necessary to show the achievements of “quality culture” construction. When the Internet is so developed, new media operation has become an effective way to publicize it. Therefore, you can create a new media account and upload the teaching videos of the college. Secondly, we should enrich the situation of panoramic experiential teaching, and innovate the teaching methods to provide more materials for the publicity work. These two steps are inseparable from

the support of a strong faculty team. Therefore, students are not only required to be required to grow in various aspects, but also to strengthen the training of teachers. They can send them to professional related industries to enrich their own experience, and then innovate in teaching methods and design panoramic experiential teaching more reasonably. [8]

5.3. Strengthen the application of modern science and technology, and promote the modern development of panoramic experiential teaching mode

In constructing the panoramic experiential teaching mode, it is necessary to give full play to the advantages of science and technology and integrate science and technology into the teaching. For example, when building panoramic scenarios, VR technology can be used to make students immersive. At the same time, teaching resources can also be shared with various universities through the Internet to enrich the teaching resource base, so as to provide more data support for the optimization of panoramic experiential teaching mode.

6. Conclusions

The concept of a “new normal” is not uncommon in the economic, cultural and social fields, and it has become a popular concept since the 18th CPC National Congress as a hot word in various fields. In the face of the new normal of higher education, higher education needs to pay attention to the cultivation of application-oriented talents, and talent training is more closely related to social and economic development. The development of independent colleges plays a key role in the cultivation of talent training and the optimization of education mode. Panoramic experiential teaching mode can be said to be at the requirement of “applied talent training” of a teaching mode, through the construction situation, let students into the real situation can make up for the deficiency of the traditional education in practice ability training, need to strengthen the teachers during training and make full use of science and technology, promote the development of teaching high efficiency and high quality [9].
